D.O. No. 7-71/2019/NVBDCP/DEN/Advisory  
Dated: 27<sup>th</sup> March, 2019

Dear Sir/Madam,

As you are aware, climatic conditions are key determinants for the transmission dynamics of Dengue and Chikungunya. With the rise in temperature, there is possibility of increased Aedes vector density intensifying the transmission of both the diseases. Therefore, this is the time for planning and sensitization of the stakeholders. It is also important to review the previous year's disease situation and initiatives taken to plan appropriate intervention.

As no effective vaccine or specific drug is available, vector control is the mainstay for prevention and control of these diseases. Monitoring of entomological indices and timely analysis are also pivotal. Furthermore, effective community participation and meaningful inter-sectoral collaboration are also key components for Dengue and Chikungunya control.

I would like to take this opportunity to request you to develop an activity-wise action plan with time frame for strengthening disease and vector surveillance, capacity building, diagnosis, case management, vector control, communication plan etc. Programme implementation needs to be monitored at district, municipality and state level for assessing the progress made. Moreover, timely submission of reports is a pre-requisite in monitoring, and feedback.

With regards,

Yours sincerely,

(Dr. P.K. Sen) 27/03/2019
